

Benefits of preventive testing

Preventive care is important for your pet's overall health. It **evaluates risks of disease, establishes healthy baseline values; and may uncover conditions not found during a physical exam.**

Based on the findings, your veterinarian will provide you with recommendations for your pet's nutrition, dental care, vaccinations and heartworm, flea, and tick prevention, as well as recommendations specific to your pet's health status and risk factors.

Proactive care is better than reactive care

Here are some examples of common diseases in pets that you can help detect early, before they become painful. **Your pet deserves it.**

- Chronic Dental Disease
- Kidney Disease
- Diabetes
- Arthritis
- Thyroid disease
- Cancer

Ask your veterinarian about diagnostic health screening for your pet

Your veterinarian may be able to **detect issues earlier and treat them sooner with simple diagnostic health screening** designed for your young and adult pets. Diagnostic screening is also used to establish individual baselines to closely monitor your pet's health. This clinic uses Zoetis Diagnostics to aid in the evaluation of your pet's health.

Schedule preventive care visits

Preventive care visits with your veterinarian are the perfect time for you to ask medical questions, track behavioral and weight changes, and receive tips for at-home care. Some topics that may be covered during your visit include:

- Behavior/Mobility
- Oral health
- Environment
- Parasite control
- Elimination
- Vaccination
- Nutrition
- Diagnostic screening

Schedule your next appointment today!

Diagnostic Health Screening

FOR YOUNG AND ADULT PETS

How old is your pet in human years?

Cats and dogs age faster than people; one human year can be equivalent to multiple years of your pet's life. Use the chart below to find out approximately how old your pet is in human years and speak with your veterinarian about their life stage.

→ **Aging and undetected disease are why regular diagnostic screening may be recommended by your veterinarian.**

DETERMINE YOUR PET'S LIFE STAGE

Young adult	Mature adult
-------------	--------------

Your cat's age ¹	Equivalent age in human years
2-6 years	24-40 years
7-10 years	44-56 years

Your dog's age ²	Your dog's weight			
	< 9kg	9-22 kg	23-41 kg	> 41 kg
Equivalent age in human years				
1-6 years	15-40	15-42	15-45	15-49
7-9 years	44-52	47-56	50-61	56-71
10-12 years	56-64

Diagnostic health screening recommendations*

Use the age and key charts on the left with the table below to **see what specific tests your veterinarian may recommend based on your pet's physical exam**, life stage, and individual needs.

	CHEMISTRY PANEL Provides information on several organ systems, important proteins, and electrolytes.
	COMPLETE BLOOD COUNT (CBC) Provides information on red and white cell counts to detect anemia and inflammation, and for platelets that are involved in blood clotting.
	URINALYSIS Provides information on the urinary system and helps interpret the chemistry panel.
	FECAL Screens for intestinal parasites.
	INFECTIOUS DISEASE In dogs, screens for parasitic diseases such as heartworm and tick-borne diseases. In cats, screening is lifestyle dependent for diseases such as Heartworm, Feline Leukemia Virus (FeLV) and Feline Immunodeficiency Virus (FIV).
	THYROID TESTING Determines if the thyroid gland is functioning normally. Recommended for senior cats and dogs with clinical signs.
	BLOOD PRESSURE Screens for hypertension or hypotension that can accompany certain diseases.

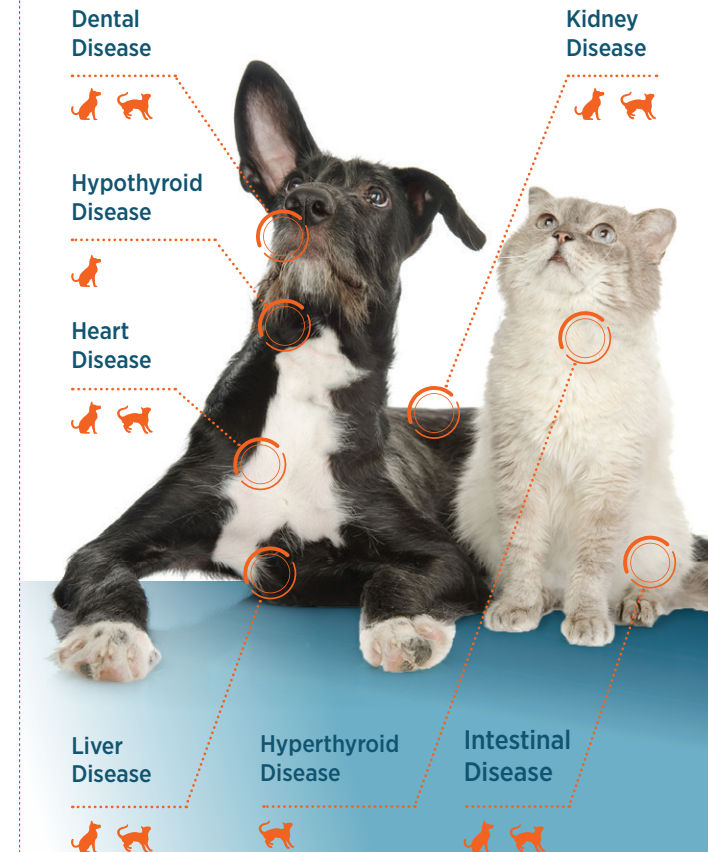

* Recommended by the American Animal Hospital Association and the American Association of Feline Practitioners.

Why wait until your pet is showing signs of disease?

Preventive testing and wellness **visits are an easy, fast, affordable way to help ensure** your pet lives a happy and healthy life.

Common diseases found through preventive testing

It's important to perform regular diagnostic testing recommended by your veterinarian. The sooner you find any abnormalities, the faster you can take action to help your pet. **Many diseases can be treated and monitored with early diagnosis.**
